## Conference papers available

**Construction Innovation's Third International Conference, Clients Driving Innovation: Benefiting from Innovation, proved a huge hit with over 200 delegates and conference presentations are now available for [download](#).**

## Maximising public good outcomes in construction

**Dr Siobhan Austin,**  
*Curtin University  
of Technology*

**Research undertaken by the CRC for Construction Innovation has found that government policies which attempt to leverage social outcomes on public construction contracts achieve mixed results in the delivery of net social benefits.**

## From the CEO's desk

### Achieving 2020 vision for Australia's construction industry

The Australia [2020 Summit](#) has galvanised calls for action on a number of important issues and long-term challenges critical for Australia's future.

The CRC for *Construction Innovation* undertook a similar process in the development of its [Construction 2020](#) initiative, which established a vision for the future of Australia's construction and property industry. Construction 2020 involved a series of workshops held in every capital city of Australia that sought the views of hundreds of industry leaders and members on their vision of the future.

Environmentally sustainable construction was a key goal listed by stakeholders for the year 2020 and it was pleasing to see this message strongly reinforced by the 2020 summit delegates last month. The summit called for a whole-of-government approach to sustainability and a proposal for all new buildings constructed beyond 2020 to be carbon neutral.

Another key vision from the CRC's Construction 2020 initiative was the goal of a harmonised regulatory financial and procurement framework. Similarly, the Australia 2020 Summit's Future of the Australian Economy stream focused on the need for regulatory reform to improve productivity, remove barriers to competitiveness and reduce the cost of doing business for companies in Australia.
