eContracting – Security and Legal Issues

Risks and recommendations solutions chart

The following solutions chart provides a 'snapshot' of the critical security and legal risks that may arise when construction contracts are formed, administered and recorded within an electronic environment, and has recommended steps that may be taken to resolve or minimise these risks. Refer to eContracting – Security and Legal Issues for a full discussion of risks and recommendations.

It is provided to you for use within your organisation as a checklist of current risk mitigation measures or to plan for implementation of electronic contract administration by providing a framework to identify your organisation's specific solution requirements.
