

20 – 24 year olds in the building and construction industry are four times more likely to have a fatal accident than those in other industries.

What are you doing about it?

Safety leadership is an action, not a job title

The new **Safety Leadership Foundations** program provides Supervisors and Managers with practical and ready to use skills to create and maintain a safe work culture. You will learn who is accountable for what and how to determine your legal obligations with access to our specialist lawyer. This practical and interactive program is the outcome of a two year industry-led research project supported by the Office of the Federal Safety Commissioner, which won the Australian Institute of Building's Professional Excellence in Building Award 2007.

Program Facilitators – Safety Dimensions

With a team of 40 Facilitators, Safety Dimensions is a leader in building safety cultures and as a testament to the outcomes achieved is the only organisation to be licensed by John Holland Group to deliver the Certificate IV in OHS (Construction).

Program Partner – CRC for Construction Innovation

The Cooperative Research Centre (CRC) for *Construction Innovation* is Australia's national research, development and implementation centre focussed on the needs of Australia's property, design, construction and facility management industry.

Program Contributor – Baker & McKenzie, Legal Advisors

Baker & McKenzie's OHS team is comprised of lawyers with specialist OHS training and experience who advise not only on legal obligations, but also provide practical guidance on proven strategies to develop safer workplaces. Baker & McKenzie provides advice to participants on the Safety Leadership Foundations program.
