Topics for Discussion

- Viability and valuation
- Commercial property market volatility
- Office rent and construction activity determinants
- Forecasting office rents and space supply
- Valuation implications
- New research

Market Rent Equation – Brisbane CBD

$$R_t = \beta_0 + \beta_1 R_{t-1} + \beta_2 V_{t-2} + \beta_3 SU_{t-2} + \beta_4 AB_t + \beta_5 I_t + \epsilon$$

Where:

R = Prime Effective Gross Rent Rate (CPI Adjusted)

V = Vacancy Rate as % of Total Stock

SU = New Office Supply as % of Total Stock

AB = Net Space Absorption in m²

I = Commonwealth 10 Year Bond Rate (Annual Average)

Office Space Supply Equation – Brisbane CBD

$$C_t = \beta_0 + \beta_1 \Delta R_{t-2} + \beta_2 V_{t-4} + \beta_3 Y_{t-2} + \epsilon_t$$

Where:

C = Office Completions in m² as a % of stock

ΔR = % Change in Prime Effective Office Rent Rate

V = Office Vacancy Rate as a % of Total Stock

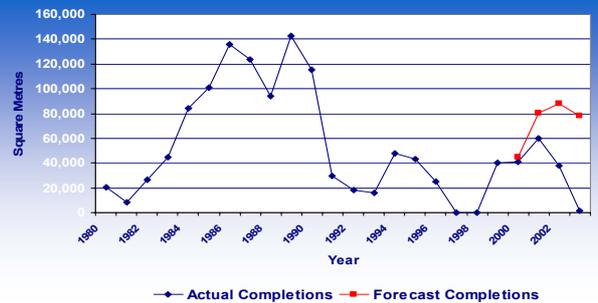

Y = Office Buildings Net Yields

Rent Forecast Sensitivity

Building	CBRE Valuation	Valuation Using Model Generated Forecast	% Variation	Valuation Using Mean Valuers' Forecast	% Variation
111 George Street	\$103M	\$98.5M	-4.4%	\$106.5M	+3.4%
Education House	\$66M	\$60M	-9.1%	\$65.5M	-0.8%
Mineral House	\$77M	\$74.5M	-3.2%	\$81.25M	+5.5%
Primary Industries	\$29M	\$25M	-13.8%	\$27.5M	-5.2%

Value / Rent Mapping

Conclusions

- Industry inconsistencies exist in property market forecasts
- International research provided guidance on key office rent and construction activity determinants
- Pure mathematical models found to over-predict in local circumstances
- Varying forecasts found to have material impact on property assessments
- Further research avenues identified
